

ABSTRACT

A sweet jellied paste which is produced without sugar, using materials which have medicinal properties. Dried fruits 1 are immersed in water to thereby
5 obtain restored fruits and immersion water 2, which are then kneaded together with agar liquor 3 through several kneading processes including a first kneading process 4 and a second kneading process 5. Thus, respective materials are well mixed and harmonized, thereby obtaining healthy sweet jellied paste with an enhanced flavor.
